

25th January 2022

Dear Post Liver Transplant Patient

We are writing to you to advise you about the latest national recommendations for COVID-19 vaccinations in immunocompromised patients.

A booster vaccination (a “fourth” jab), if you have completed your 3 vaccinations, is now recommended at a minimum of 3 months since your last dose. Please use this letter, which confirms your eligibility for a booster vaccination, at a vaccination centre near you. We wish to remind you to complete the course of your 3 vaccines – if not already done – at your earliest.

Finally, we wish to apologise for the duplication, if you have already received notification for this from other government agencies.

Yours sincerely

Mr Andreas Prachalias

Consultant Surgeon in Liver Transplantation and HPB Surgery

Clinical Director for Liver Studies, Gastroenterology & Endoscopy
